

US EPA ARCHIVE DOCUMENT

DATE: October 5, 1979

SUBJECT: Registration#352-270 - 32-Week Mouse Feeding Study with Linuron.
(3,4-Dichlorophenyl-1-Methoxyl-1-Methylurea). CASWELL#528

FROM: Charles Frick *c. Frick*
Toxicology Branch (TS-769) *WSW*

TO: Mr. R. Taylor
Product Manager#25 *WJ Brown*

THRU: Dr. M.A. Gross, Chief
Toxicology Branch (TS-769) *Releasable*

Recommendation & Comments

The terminated mouse study was not reviewed as at this point in time, a review of this data would not serve any scientific or regulatory purpose - package is being returned to PM for appropriate action.

Package contained a 2-year mouse feeding study that had been terminated at 32-weeks because of infected animals. Core Classification will be at best Supplementary.
